

## SPM DB12 (Double Braided Polyamide)

### CONSTRUCTION

Ropes with a double-braid design are traditionally the preferred construction for single point mooring hawsers.

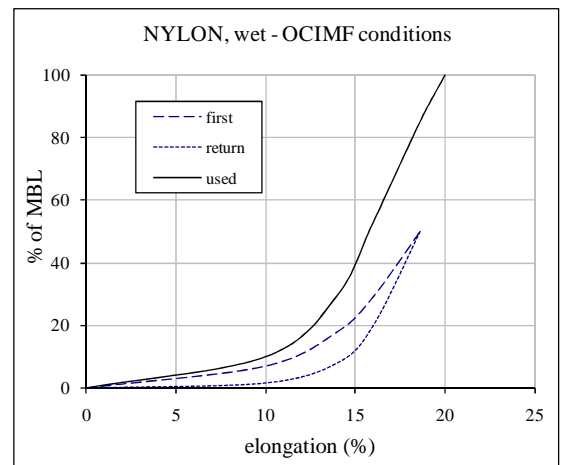

### MATERIAL PROPERTIES

Polyamide or Nylon was the first synthetic fibre discovered. It is available as a fibre as nylon 6 and nylon 6-6. In ropes both types are generally equally suitable. Since nylon was the first fibre discovered it is better established than polyester but the fatigue properties of polyester are better than those of nylon.. Under normal conditions of use nylon 6 is influenced water; it has a softening effect. The UV resistance is acceptable.

### FEATURES

- Material: Polyamide (nylon)
- Construction: 12 strand braided with a braided cover of polyamide
- Treatment: Marine finish
- Colour of Rope: White with green marker
  
- Approx. Spec. Density: 1,14 non floating
- Melting Point: 215° C
- Abrasion Resistance: Excellent
- U.V.resistance: Excellent, due to jacket
- Temperature resistance: 80° C max continuous
- Chemical resistance: Reasonable; acids, oxidisers & solvents will affect nylon
- Dry & wet conditions: Wet strength ± 5% lower than dry strength

Break Load and length according to OCIMF

Weight: ± 5%  
Diameter: ± 2%
